

AN EFFERVESCENT TABLET THAT PROVIDES AN EXCELLENT SOURCE OF ENERGY, ABSORBABLE ELECTROLYTES AND INTESTINAL PROTECTIVE INGREDIENTS FOR YOUNG ANIMALS SUFFERING FROM DIARRHOEA (SCOUR).

1. DIARRADRAL is a soluble rehydration tablet that provides an oral solution to calves, lambs, kid goats and piglets that are effected by, or recovering from diarrhoea.
2. It contains easily absorbable electrolytes and intestinal protective ingredients which supports the physiological digestion system of the young animal.
3. Diarradral is an excellent source of energy to help the young animal recover as rapidly as possible.
4. Each tablet is individually heat-sealed and is effervescent, where it dissolves once dropped into water.
5. To administer: dissolve 1 Diarradral tablet in 1 litre of water at 40°C; except for piglets at 1 tablet into 2 litres of water at 40°C.
 - » Calves: If displaying symptoms of diarrhoea feed 2 tablets per day in 2 litres of water by feeding orally or by stomach tube. This should be fed separate to milk replacer or wholemilk.
 - » Lambs: Dissolve 1 tablet in 1 litre of water at 40°C and leave dissolved solution available to the lamb (lambs) to consume. This can be repeated up to a maximum of 2 tablets per lamb per day.
 - » Kid Goats: Same as lamb instructions directly above.
 - » Piglets: Dissolve 1 tablet in 2 litres of water at 40°C and leave dissolved solution available to the piglet (piglets) to consume. Once consumed add another 2 litres of dissolved solution up to a maximum of 2 tablets (4 litres) per piglet per day.
6. Shelf life: 18 months from date of manufacture.
7. Available in tubs of 48 X 50g tablets (individually heat-sealed).
8. Store in a cool, dry place below 30°C and out of direct sunlight.
