

# HYPOMAG

**A DIETETIC COMPLIMENTARY MINERAL FEED FOR BOVINES (BOLUS) WHICH AIDS IN THE PREVENTION OF HYPOMAGNEAEMIA (TETANY)**

1. Nutritrace Hypomag bolus is designed to aid in the prevention of hypomagnesium (grass tetany/grass staggers) in cattle. It ensures an animal's magnesium requirements are sufficient during the high risk period associated with grazing in Spring.
2. It counteracts the low levels of magnesium found in pasture in early Spring at the start of the grazing period by providing a slow release of magnesium for 4 weeks.

### NUTRITIONAL ADDITIVES (SOURCE IN BRACKETS):

Mineral Composition	mg/kg	mg/day (2 Bolus)
Magnesium	333,000	1,554
Trace Elements	mg/kg	mg/day (2 Bolus)
Zinc (3b603 - Zinc oxide)	75,000	350
Copper (3b404 - Copper (II) oxide)	7,500	35

3. It can be administered to both suckler and dairy cows 2-3 days before the expected risk period and smaller stock prior to being put out to fresh pasture. If necessary it should be repeated after 4 weeks.
4. Administer 2 bolus of 70g per adult bovine (greater than 350kg) or 1 bolus of 70g to bovines 200-350kg.
5. Release time: 30 days.
6. Pack size: 50 x 70g bolus.
7. Shelf life: 18 months from date of manufacture.
8. Always use the approved Nutritrace bolus applicator.
